5G Requirements - Smart Metering Rollout

Programme: Municipal smart electricity meters, 3 districts
Owner: City Utilities Department

1. Purpose
Replace 40,000 electromechanical meters with connected smart meters that report consumption every 15 minutes to the utility head-end system.

2. Reported needs
- Each meter sends a small reading every 15 minutes.
- Devices are battery assisted and must last 8 years in the field.
- The rollout covers dense apartment blocks and low-density suburbs.
- Connections: 40,000 meters active on the municipal network.

3. Not yet specified
The procurement team has not fixed the latency budget, the reliability target, the per-meter uplink rate or the spectrum allocation. These must be agreed with the network operator before the slice is provisioned.

4. Notes
Peak reporting windows are 06:00-09:00 and 18:00-21:00. A missed reading can be retried later in the day.
